

TF1VHF 4m Beacon

Admin,

On the 12th May the TF1VHF 4 m (70,057 MHz, 20 W) and 6 m (50,457 MHz, 25 W) beacons went on air from the real beacon site in HP84WL at Álfanes about 80 km NNW from Reykjavik. The beacon antennas are beaming NW/SE and are located about 60 m AGL and about 70 m ASL. Both beacons transmit in a one minute sequence PI4 + CW + carrier. The beacons have been sponsored by Olafur, TF3ML, while Ari, TF1A is technically responsible.

Bo, OZ2M
